

TRADITION MEETS INNOVATION!

Company

Introduction by Cornelia Zewe

I've had the pleasure of leading this company in its third generation. 35 years ago, I would never have believed that it would be possible to pursue a career with so much vigour and passion

with the perfect balance between children, family and business. Of course, there have been a number of ups and downs over the years, as it to be expected. However, we successfully rose to every challenge that came our way and never failed to achieve anything through the support and solidarity of our family. Change is a major component of our business: from product portfolios, transactions, developing machinery, and our customers' requests.

Our flexibility has allowed us to grow stronger together with our customers and fulfil practically all wishes.

Short communication channels within our company structure and our smoothly operating team have kept us flexible and able to accommodate special requirements. Our site in Dillingen has 3 production halls, where we provide our services.

It is with great pleasure that I am now able to announce that the fourth generation, my sons, will now be actively joining the company to support me and ensure the long-term success of Zewe GmbH.

We look forward to working with you in the next chapter of our cooperation.

Cornelia Zewe
Managing Director

History

60 years Zewe!

Our traditional family-run company came into being on 5th July 1961 under the helm of its founder Otto Meiser. Initially started as a locksmith's shop, the company quickly made a name for itself as a subcontractor for made-to-order vibrating feeders.

Over the years, our product range has continued to grow. Otto's stepson Theo Zewe joined the company in 1968, leading to the expansion and successful marketing of Otto Meiser & Zewe GmbH designs in the field of conveyors (with a focus on foundry machinery) around the globe. The successful development of our products helped our company to quickly cultivate its independent market presence, which is continually maintained and expanded to this day. We have since grown our customer base to include

customers from Russia, India and Iran amongst our business partners. We also deliver to: Argentina, Australia, Egypt, Belgium, Denmark, England, France, Greece, the Netherlands, Italy, Switzerland, Sweden, ...

Zewe GmbH is currently in its fourth generation and has been headquartered in Dillingen since 2000.

We offer our own developments and designs, complete production processes from engineering to connecting and commissioning all specified products and other new innovations.

As is to be expected, we provide existing clients with extensive maintenance and service in addition to on-site troubleshooting for all matters related to our area of expertise.

Our product portfolio at a glance:

Seit über 30 Jahren Ihr kompetenter Partner
in Sachen Systemverpackungen

Initial contact:

In the initial meeting we discuss your concerns or issues you require assistance with.

Requirement analysis:

Following this, we take a closer look at your request and the proposed task. Using a requirement analysis we then determine which machinery, model or how we can help you.

Quotation:

The quotation incl. material planning or a drawing is an obligatory component of this process. We use this to determine whether the task is technically feasible or whether your existing structure is suitable for the planned solution.

Product development:

Once the order has been confirmed, you will receive regular updates on the current workflow, including information on any procedures/requirements that you may be required to take into account with respect to electronics, for instance.

Delivery:

We will then safely transport your product to the requested location. If needed, we are also more than happy to handle the installation and commissioning of the product or to provide you with advice in this regard.
